

# [HANDS-FREE AMPLIFIER FOR MOBILE TELEPHONE]

## Abstract of Disclosure

A hands-free amplifier for a hand-held communication device such as a mobile telephone or a personal digital assistant. The hands-free amplifier directly plugs into the hand-held communication device so that external wires are unnecessary. The amplifier includes a loudspeaker, a microphone, some control circuits and an internal battery pack. The incorporation of internal battery pack eliminates the need for electrical energy from an external power source.
